Pulse Shape Discrimination
Ideal for Neutron & Gamma ray discrimination measurement in Liquid Scintillator

Features
For the waveforms collected on the DPP board, integrate the specified ranges individually for TOTAL (Full range), FALL (Falling edge), RISE (Rising edge) (see the figure below), and send it as list data to the PC via the Ethernet forward. It can display a 2D histogram based on the integration result. The object of the vertical and horizontal axes of the histogram can be selected arbitrarily (e.g. horizontal axis FALL / TOTAL, vertical axis FALL), it is also possible to extract a specified range of data and display a one-dimensional histogram.
